PROFESSIONAL SUMMARY

Full-Stack Developer with 3 years of experience building production-ready web applications and applied machine learning systems. Experienced in owning features from requirements through deployment across frontend and backend. Built a React + FastAPI algorithm visualizer, a CNN+LSTM audio classification system achieving 88.75% recall, and a fraud detection pipeline evaluated on 284K+ real transactions. Core expertise includes React, TypeScript, Python, FastAPI, Node.js, Tailwind CSS, and end-to-end product delivery.

WORK EXPERIENCE

Full-Stack Developer | Freelance | January 2025 – Present

Remote

- Delivered full-stack applications using React, TypeScript, Python, and Node.js, owning feature development from requirements gathering through testing and deployment.
- Built InsightGraph — a full-stack algorithm visualizer using React and FastAPI with step-by-step execution, comparison mode, 16 algorithms, reusable components, and 34 automated tests.
- Developed AffectCare — a CNN+LSTM audio classification system using MFCC spectrogram features, achieving 88.75% recall and 77.6% F1 through evaluation-driven model selection.
- Developed FraudFlux — a fraud detection pipeline on 284,807 real transactions, comparing models under severe class imbalance and selecting a deployment-oriented model based on precision/recall trade-offs.
- Created StudySprout and Lumen Retreat — full-stack applications featuring authentication, dashboards, CRUD workflows, and responsive production-ready interfaces.

Software Engineer | Private SaaS Company | September 2023 – January 2025

Remote

- Collaborated in a fully remote environment, independently delivering software features while coordinating with teammates on data migration and cross-feature development.
- Owned end-to-end delivery across React frontends and Python backends from requirement clarification through testing and production deployment under real traffic.
- Built and maintained React interfaces and backend services with focus on performance, reusable architecture, clean APIs, and reliability.
- Contributed to internal platforms including KnowledgeBase and HG-db (hypergraph visualization with Rust performance bridge).

EDUCATION

B.Sc. in Software Engineering

Technical and Vocational University (TVU) of Iran · November 2025 · GPA 17.13/20 (≈3.43/4.0)

Associate Degree in Computer Software Engineering

Technical and Vocational University (TVU) of Iran · October 2023

SKILLS

Frontend: React, TypeScript, JavaScript, Tailwind CSS, React Router, Vite, HTML5, CSS3

Backend: Python, FastAPI, Node.js, Express, REST APIs, JWT

Machine Learning: PyTorch, scikit-learn, CNN/LSTM, Model Evaluation

Database & Infrastructure: MongoDB, Docker, AWS fundamentals (EC2, Lambda, Auto Scaling, Containers)

Deployment & Tools: Git, Vercel, Cloudflare Pages

LANGUAGES

English — Professional working proficiency

Persian — Native
